

Enterprise \ Directory Search

Overview

Prism's directory Search module allows a quick search of the current assignments of people and endpoints in the directory.

The overview dashboard shows the full endpoint count in the database, as well as the assigned counts in each of the three directory trees (1). The chart shows a breakdown of endpoint assignments in the selected tree (2) at the second level of the tree's hierarchy. All level 2 organizations can be shown, or just the 10 or 25 with the most endpoint assignments (3).

Endpoint Assignment

There are two views defined for Endpoint searches, by endpoint and by directory.

Endpoint View

The Endpoint View shows all endpoints that are configured in the system. If the endpoint is assigned to an organization (Department, Cost Centre, or Project) or employee then that information is shown in the row. If the endpoint is shared, then multiple rows will be displayed to show each assignee. The directory assignment to search can be selected at the top of the table, for standard grid controls see Common Features.

Directory View

The Directory View shows all organizations (Department, Cost Centre or Project) currently defined in the directory. Endpoints which are currently assigned to those organizations are shown (leading to multiple rows per organization). Endpoints which are not assigned to an organization are not displayed in this search. The directory view searched can be selected at the top of the table, for standard grid controls see Common Features.
