

## Overview

Tiger has taken the decision to mask all PSTN digits for all users, unless it is explicitly required that the end user should see all digits. The process to enable a user to see all digits is very simple. There is an audit trail which logs when this has been enabled.

### Enabling View Digits for a user

You will need sufficient access rights to enter the Security module and to edit a user record. If you do not have these rights, please contact your Tiger Administrator.

Go to Security → Employee → Search and search for the user you wish to modify. Click on the button to the left of the user.

- Once on the user record, click on the Account Details tab
- Click the EDIT button (see 1)
- Set the slider to “ON”, for the View Digits (See 2)

Now when the user looks at digits, they will be able to see un-masked PSTN numbers.
